ABOUT ME

Robotics & AI undergraduate with hands-on experience building end-to-end intelligent systems — from deep reinforcement learning agents to computer vision pipelines to conversational AI backends. Comfortable working across the backend: model training (PyTorch), APIs (FastAPI, Node.js), and databases (MySQL). Seeking internship opportunities in applied AI/ML engineering.

EDUCATION

Dayananda Sagar College of Engineering

Bachelor of Engineering in Robotics & AI

Aggregate CGPA (6th Semester): 8.65

Bangalore, Karnataka

Expected Graduation: May 2027

TECHNICAL SKILLS

Languages: Python, C++, HTML, CSS, JS, SQL

Frameworks/Tools: PyTorch, FastAPI, Node.js, REST APIs, Git

PROJECTS

ShopAI — AI-Powered E-Commerce Platform ([link](#)) ([live demo](#))

React, Node.js, Express, MongoDB, Stripe, Google Gemini API

- Built a full-stack e-commerce platform with JWT authentication, a persistent server-side cart, and Stripe Checkout with webhook-confirmed payment status, deployed live on Vercel and Render.
- Implemented semantic product search using Gemini text embeddings and MongoDB Atlas Vector Search, with an empirically-tuned relative-score filtering approach to separate relevant results from noise in cosine-similarity rankings.
- Developed a RAG-based customer support chatbot that retrieves relevant policy chunks via vector search and generates grounded responses with source attribution, using a guardrail prompt to prevent answers outside the store's knowledge base.

AI Ping Pong Agent ([link](#))

Python, Pytorch, Reinforcement Learning, Deep Learning

- Built a Deep Q-Network (DQN) agent in PyTorch that learned to play Atari Pong autonomously from raw pixel input.
- Implemented experience replay, Double DQN, and epsilon-greedy exploration to stabilize training and reduce Q-value overestimation.
- Set up TensorBoard-based logging to track reward, loss, and epsilon decay across training runs, enabling faster debugging of hyperparameter changes.

Video-Calling-App — MERN Chat & Video Calling Platform ([link](#))([live demo](#))

React, Node.js, Express, MongoDB, Stream Chat & Video SDK, JWT

- Built a full-stack MERN app with JWT-based authentication, cookie-session handling, and protected routes, backed by a friend request system with recommendation-driven user discovery.
- Implemented the Stream Chat SDK to power real-time one-to-one messaging between connected users, with session state managed by Zustand and Tanstack Query on the frontend.
- Implemented video calling through the Stream Video SDK and a language-preference-based onboarding flow (bio, location, profile picture), surfaced in a responsive React + Tailwind/DaisyUI dashboard with theme switching.
